FIDAP.

Working with script files.

1. After generating geometry in Figen, go to [CREATE] and create a FIC-GEN file. This makes a file proj.FIINP in your directory. Rename this file proj.FIINIFIGEN.

2. After applying the FIPREP commands, go to [CREATE] and make a FIPREP file. This file also is called proj.FIINP. Rename as proj.FIPREP.

Now you can read the FIC-GEN file to recreate your model and the FIPREP file to put in properties, etc.
